Isokern fireplaces

Specified most by architects, designers, builders & homeowners.

indoor or outdoor modular masonry fireplaces
The Isokern brand has been a part of the construction industry for over sixty years. Known for their exceptional insulation value and ease of installation, Isokern products were introduced in the United States in 1987. For the past 22 years, Isokern has been at the forefront of modular masonry hearth systems in the construction and remodeling industries. Isokern is synonymous with quality, efficiency and affordability.

Isokern products are made with volcanic pumice extracted from the Hekla Volcano in Iceland. Pumice stone is a natural material and is the primary component of the Isokern makeup. Unlike lower altitude pumice, Icelandic pumice contains less organic material in its make up resulting in a dense, cleaner raw material. This pumice does not expand or contract with temperature change, reducing the possibility of cracking and structural damage. Pumice is also lightweight, allowing for quick and consistent fireplace and chimney system installation.

Isokern systems are manufactured at the Earthcore Industries, LLC Manufacturing Plant, located in Chesapeake, Virginia, under strict quality assurance and testing guidelines. This detail orientated approach ensures that each firebox or chimney component produced measures up to the highest of standards. Due to its modular construction, Isokern systems can be built in a shorter time and each system is similar with only slight variations in installation techniques.

the Magnum Series

The Magnum Series has the largest opening available in the market with true finished openings of 36”, 42” and 48” width with a standard 36” height. These larger openings are ideal for more dramatic interior and exterior applications. With the proprietary straight-back interior design and innovative contoured shelf, the Magnum Series is second to none in efficiency, performance and custom design flexibility.

Applications

- Isokern DM Chimney
- Metal Chimney
- Combustible Floor Installation - See Fire-Lite

Sizes

- 36”
- 42”
- 48”
- 60”
- 72”
The largest, listed fireplace available in the Isokern product line. With openings of sixty and seventy-two inches, this fireplace system is ideal for large custom homes, hotel or multi-housing lobbies and restaurants. Similar to the smaller Magnum fireplaces in the series, this fireplace system offers a straight-wall, shallow depth design for a more traditional fireplace look.

The Standard Series was the first Isokern introduced in North America over 15 years ago. With a proven record in satisfying a broad range of diverse projects, the Standard Series is still popular for interior and exterior fireplace designs. Like other Isokern fireplace systems the Standard Series can be custom finished to suit specific design and architectural needs.

**Sizes**

- 36”
- 42”
- 46”
The Isokern B-Vent (IBV) is the only field assembled, modular refractory, gas only, top-vented appliance in the market today. It can be installed directly on a combustible floor system while still meeting ANSI Z21.50 guidelines. The IBV is a complete fireplace system including the required components, gas log burner, and a gas log set.

**Applications**

- □ 60”
- □ 72”
The Fire-Lite Series is an application for the Standard or Magnum* Series fireplaces allowing the fireplace system to be placed directly on a combustible surface. This innovative application now enables architects, builders, and designers to specify a fireplace system in projects that could not include one in the past.

Enjoy the elegance of a true masonry fireplace in areas where a chimney may not be feasible with the Vent-Free Series. The Vent-Free Series can be installed in more non-traditional areas of the house such as under a window or within an entertainment area. With its large finished openings and double-sided availability, the Vent-Free Series can be used in any new home or remodeling design.

Fireplace Accessories

Earthcore Mortar

Earthcore Mortar adhesive is a thin-set compound used for interior or exterior use. It is an approved adhesive for Isokern fireplace systems and DM chimney components. General uses include ceramic tile, fabricated and cast stone products.

eDamper

An electronic damper for the IBV (Isokern B-Vent) which addresses both comfort and energy efficiency while allowing complete design flexibility for the look of the hearth. The eDamper eliminates cold drafts by only opening when the fireplace is in use and automatically closes when the fire is turned off. This device is the answer to open damper codes and in price is similar to that of custom glass doors.

ISOFLAMES Gas Log Sets

Finding a gas log set that is sized correctly for your firebox is essential in completing a home’s hearth. Log sets not only have to be sized correctly but, also have to look like real wood and burn efficiently. Remote controlled or manual, we offer a large variety of styles and sizes that are perfect for your fireplace.

Firebrick

Firebrick is a refractory brick, capable of sustaining intense heat without fusion. It is usually made of fire clay or of siliceous material. Firebrick is not prone to expansion or contraction, helping to minimize cracking while under extreme heating conditions.

**common patterns**

- herringbone
- stack bond
- basket weave
- running bond

**colors**

- red (tumbled or square edged)
- beige
Isoflames gas log sets include the realistic and natural beauty of actual wood. After extensively researching the logs and branches of trees in their natural environment, the necessary information and data were gathered to ensure that the truest form of realism was replicated for log production. Each log is meticulously created to include cracks, fibers and unique bark knots that are commonly found in natural wood.

Each Isoflames gas log set is masterfully created using only the highest grades of ceramic and steel. Made from a high heat material that allows for greater radiant heat, Isoflames gas logs efficiently add warmth to your room. All log sets are accompanied by a high grade stainless-steel, sand-less burner ensuring a longer life for your log set and providing a clean natural flame.

With an Isoflames gas log set there is no hassle of venturing out into the elements for logs and no ash clean up on your fireplace or hearth. A simple push or turn of a button is all it takes and you can enjoy the warm beauty of natural looking logs anytime.

Logs & Accessories

Open Country - Vented

The Open Country log style is a combination of different sized logs to appear as if each one was taken from the same tree. Logs with cracks and knots are also included to complete this realistic log style. With burned edges, bark color variances and proper log sizing it is easy to see why the Open Country looks realistic when it is on or off.

Sizes
- 18”
- 21”
- 24”
- 30”
- 36”

Rustic Ridge - Vented

The Rustic Ridge log style has a beautiful, realistic charred timber wood characteristic to it. With natural misshaped logs and burned edges, the Rustic Ridge offers realism and affordability all in one style.

Sizes
- 18”
- 21”
- 24”
- 30”
- 36”

Canyon Trail - Vent Free

The Canyon Trail vent free log set is perfect for the Isokern Vent Free series, and is available for Indoor fireplaces. This vent free log set can be fueled by either Liquid Propane or Natural Gas and has sensors that automatically turn the unit off when too much gas is escaping.

Sizes
- 18”
- 21”
- 30”
- 36”
- 24”

Accessories

Lava Rock

Lava rock is an accessory that adds beauty, realism and functionality to each log set. These light density, black rocks offer great contrast to your log style and will not absorb the heat that is radiated from the flames. Lava rock is offered with each log set and is ideal when placed underneath and surrounding areas (i.e. bottom of the fireplace) of the log set.

Glowing Embers

Our deep colored ember material is used as an aesthetic addition to complete the view of real wood burning at the bottom of the fireplace. These embers are placed around the log set and burner in an inconsistent, natural looking manner to create that ideal glow under or around each log set. The glowing embers may look like natural material or fibers burning but, due to their fibrous nature will not actually degrade allowing you to use them year after year.
The DM or dual module chimney system is a component based chimney system that has an inner liner and an external casing. The modular design of this system allows for more diverse, lightweight chimney installations for fireplaces and other applications. Isokern DM chimney components are built with tongue and groove construction, enabling a tighter fit for maximum safety and consistent installation.

Offset Block

Isokern Offset Blocks offer the ability to move vertical chimney from side to side to pass objects above the firebox. Many current architectural specifications require a diverse chimney system allowing for more custom designs.

Brick Ledge

The Brick Ledge component is uniquely designed to allow a brick or stone chimney to exit out the roof for interior fireplace installations. This component eliminates the cost of having excess masonry carried down the footer.
Chimney Systems

Copper Chimney Pots
Named after chess pieces, copper chimney tops add a crowning glory to your home. These copper chimney pots are designed to turn an ordinary flue and termination into a fabulous finish that will sit on your roof top for years to come.

Clay Chimney Pots
The perfect termination for any chimney system, clay chimney pots are traditional, simple and have been a mainstay in the fireplace and chimney industry for decades. Efficient, visually appealing and sturdy, clay chimney pots enhance the beauty of any home.

Iso-Cap
Specifically designed to fit the Isokern 14" (fourteen inch) flue liner, Iso-Cap installation is minimal. Each Iso-Cap simply slides into the terminating flue and is sealed with silicone caulk. Installation is easy, clean and quick. Available in copper, black galvanized and stainless steel.

Exhaust Fans
Exhaust fans are used to help control the draught efficiency of your fireplace or appliance improving air quality. These chimney fans feature automatic controls which guarantee optimum chimney draught irrespective of the placing, dimensions or height of the chimney.
