**TECHNICAL NEWS BULLETIN
VOLUME ONE
APRIL 20, 2009**

As you know the Fire-Lite has always been an application of our Standard Series fireplace available for use on a combustible floor with an 8" clearance.

We have recently been approved to promote both the Standard Series and Magnum Series fireplaces as Fire-Lite units!!!!

Specifications are as follows:

**** New Clearance to combustible floor: 4".** This will be reflected in the rating plates/labels attached to the interior of each fireplace unit.

**** The 4" metal stand supplied by Earthcore must be used!** No more CMU block installations!

**** For Fire-Lite Magnum installations, a single base plate must be used.**

**** The 8" stand will no longer be ordered.** If a homeowner wants a raised hearth application and still requires a Fire-Lite application, they can build up a base to within 8 1/2" of their desired height, (8 1/2"= FL Stand, Base-Plate & Fire-Brick) then place the Fire-Lite stand on their raised form. Structural integrity of the raised platform our metal stand will sit on must be assured by the general contractor, the builder and the installer.

Please feel free to contact the Technical Department if you have any questions or need additional information!
