IBV plus eDamper

Electronic Damper Assembly

Features

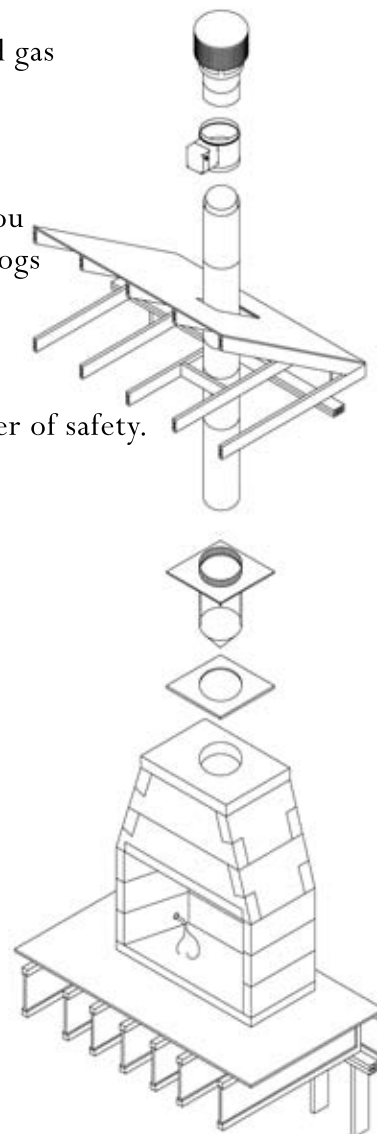

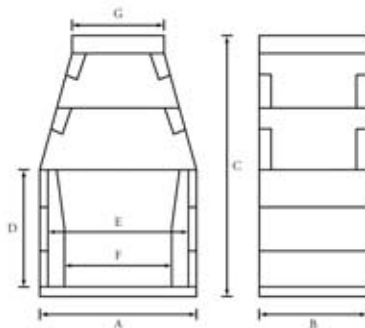

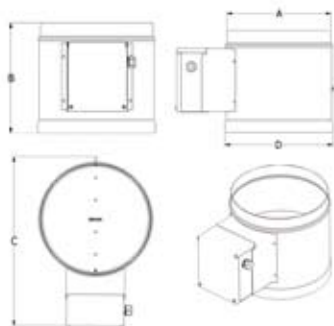

- Compatible with the Isokern B-Vent Series, the only modular, masonry vented gas (only) appliance available in North America.
- Eliminates drafts in home by closing the flue when it's safe to do so, trapping conditioned air inside the flue and inside the home.
- Electronically opens and closes your fireplace flue, automatically, whenever you turn your gas logs on and off ensuring that your flue is open before your gas logs ignite and that it closes as soon as it's safe to do so.
- Keeps flue warm for improved, natural draft condition which helps eliminate fumes from entering room.
- Built-in safety control circuitry and dual, redundant switches add an extra layer of safety.
